THE PARCEL CONCIERGE · OPERATIONS

Shopify Training Manual

How to add a product to Shopify, which collection to put it in, and exactly where it will appear on theparcelconcierge.com.

Version 1.0 · 21 September 2026

Prepared by Rooftop Twenty Two

Written from the live website code, not from convention

Every rule in this manual was read out of the running site. Where the manual says a page reads a collection, that is the handle the code asks Shopify for.

What is in this manual

1	**The one idea that explains everything**	Collections, tags and what each one controls
2	**The seven rules**	Read once, follow always
3	**Adding a product**	Field by field, including the import checkbox that catches everyone
4	**Where do I put it?**	The decision tree
5	**The collection map**	Every collection and the page it feeds
6	**The tag dictionary**	Every tag the site reads, and the ones it ignores
7	**Build a Gift**	The eleven shelves
8	**Worked examples**	Five real products, start to finish
9	**It is not showing up**	Fault-finding in order
10	**Dormant collections**	The six that are switched off, and how to switch one back on

WHO THIS IS FOR

Anyone at The Parcel Concierge who adds or edits products in Shopify. You do not need to understand the website to use it — follow the decision tree in section 4 and the product will land in the right place.

1 The one idea that explains everything

The website asks Shopify three separate questions about every product. Three questions, three different answers, three different things you control.

THE QUESTION	WHAT ANSWERS IT	WHAT IT CONTROLS
What page does it appear on?	The **collection** it is in	Whether it shows on /hampers, /wine, /occasions/christmas, a Build a Gift shelf, and so on. This is the big one.
What kind of thing is it?	The `type:` **tag**	Its web address, which page template it uses, and whether the over-18 gate appears.
How do shoppers narrow it down?	All the **other tags**	The filters down the side of a listing — grape, country, region, occasion, recipient.

THE SINGLE MOST IMPORTANT CONSEQUENCE

A Shopify product CSV **has no column for collections**. So a spreadsheet import can classify and tag every product in the shop, and it still cannot put one single product onto a page. Collections are added in the Shopify admin, by hand or by an automated rule. **Importing a CSV and expecting products to appear on the site will not work.**

Said another way

Think of the website as a shop floor
The collection = which shelf you physically put the box on. If it is on no shelf, no customer walks past it.
The `type:` tag = the label on the box saying what it is, so the shop knows whether to card the buyer.
The other tags = the little signs a customer uses to find "red wine, French, under €25".

2 The seven rules

1. **If it is not in a collection, it is not on the website.** It can be published, in stock and perfectly tagged, and still be invisible. Search will find it; no page will list it.
2. **Every product goes in at least one collection.** Hampers and wines have their own. Everything else goes in `all-gifts` plus one Build a Gift shelf.
3. **Never remove the old tags.** Tags like "French Wines" and "Chenin Blanc Wine" are not legacy clutter — they are what fills the Country and Grape filters today. Add to them; do not tidy them away.
4. **Never put `type:builder-item` on a real product.** It removes the product from every listing, from search, from the sitemap and from Build a Gift. See section 6.
5. **A page needs four products to open.** Under four, the page redirects to its parent. This is deliberate — an empty page is worse than no page.
6. **Out of stock means off the site.** Listings and search hide anything unavailable. You do not need to unpublish it.
7. **Changes take up to an hour to appear.** The site caches pages for speed. Nothing is broken; wait, or ask Rooftop Twenty Two to clear it.

3 Adding a product

Two ways in: one at a time in the admin, or in bulk by CSV. The fields are the same.

3.1 The fields that matter to the website

FIELD	REQUIRED?	WHAT THE SITE DOES WITH IT
Title	Yes	Shown on the card and the product page. Also what site search matches on.
Handle	Auto	The web address. **Never change a handle on a live product** — it breaks every existing link and any Google ranking.
Description	Yes	The product page body. Worth writing properly; it is what ranks.
Images	Yes	First image is the card image. Landscape 4:3 works best.
Price	Yes	Price bands are worked out from this automatically. There is no price tag to set.
Inventory	Yes	Zero stock hides it everywhere.
Published	Yes	Unpublished is invisible, full stop.
Product type	No	Leave blank unless it is a Build a Gift box, which uses `GIST_BUILDER_PRODUCT`. Do not set that yourself.
Tags	Yes	See section 6.
Collections	Yes	See sections 4 and 5. **This is the one that decides where it shows.**

3.2 Adding one product by hand

1. **Products → Add product.** Fill in title, description, images, price, stock.
2. **Tags.** Work through section 6 and add every tag that applies.
3. **Collections.** In the right-hand panel, add it to the collections section 4 tells you. *If a collection is automated, you cannot add it here — it joins by itself once the tags match.*
4. **Save**, then check it on the site within the hour.

3.3 Importing by CSV

> **TICK THE OVERWRITE BOX**
>
> On **Products → Import**, you must tick **"Overwrite any current products that have the same handle"**.
>
> Without it, Shopify **silently skips** every product whose handle already exists. On a re-tagging import that means almost nothing changes and the file looks like it did not work. This has already caught us once: a wine collection came back with 314 products instead of 373.

1. Export first: **Products → Export → All products → CSV**. That is your rollback.

2. Import the new file with the overwrite box **ticked**.
3. Wait for the confirmation email. Large files take several minutes.
4. Spot-check five products: right tags, right price, images still there.
5. **Now do the collections**, which the CSV could not touch.

4 Where do I put it? The decision tree

Start at the top. The first line that matches is your answer.

Is it a finished hamper or gift box we sell as one product?

Yes → Collection: `christmas-2026` (titled "General Hampers 2026")
Tag: `type:hamper`
Appears on: /hampers, the matching price band, the homepage hamper band, and /occasions/christmas. The price band is chosen automatically from the price — you do nothing.

Is it wine, Champagne, port or sherry?

Yes → Collections: `fine-wines-1` **and** its colour or style collection (`red-wines-1`, `white-wines-1`, `rose`, `champagne-and-prosecco-1`, `port-and-sherry-1`, `organic-wine`, `non-alcoholic-1`, `wine-gift-sets`)
Tags: `type:wine`, `contains:alcohol`, plus country, region and grape
Appears on: /wine, the colour page, the right price band. Filters need the country/region/grape tags.

Is it a spirit or liqueur?

Yes → Collection: `fine-wines-1`
Tags: `type:spirit`, `contains:alcohol`

Anything else — chocolate, candles, crystal, baby, cards, homeware, food

→ Collections: `all-gifts` **and** one shelf from section 7
Tag: `type:addon`, plus `contains:alcohol` if it contains any
Appears in: Build a Gift, on the shelf you chose. It will not have a section of its own, and that is by design.

WHY THERE IS NO GIFTS SECTION ANY MORE

The site sells **hampers and wine** as its products. Everything else is sold as something you put into a hamper, through Build a Gift. A chocolate bar is not missing from the site because it has no gifts page — it is on the chocolate shelf of the builder, which is where it is meant to be.

THE COLLECTION WITH THE CONFUSING NAME

The hamper collection's handle is `christmas-2026` but its title is **"General Hampers 2026"**. It was renamed in Shopify and Shopify keeps the original handle when you rename. The website asks for it by handle, so it still works.

Put every hamper in it, all year round — not only Christmas ones. It is the hamper range, despite the name. Renaming it will not change the handle; creating a new collection to replace it would empty the hamper pages, so please talk to us first.

5 The collection map

Every collection the website reads, and the exact page it feeds. If a collection is not on this list, the website does not look at it.

5.1 Hampers

COLLECTION HANDLE	FEEDS THESE PAGES	NOTES
`christmas-2026` *"General Hampers 2026"*	/hampers /hampers/under-75 /hampers/75-125 /hampers/125-200 /hampers/luxury-200-plus /occasions/christmas homepage hamper band	**LIVE — one collection feeds all seven. Price bands split it automatically: under €75, €75–125, €125–200, over €200.**

5.2 Wine

COLLECTION HANDLE	FEEDS THIS PAGE	NOTES
`fine-wines-1`	/wine/fine-wines /wine/under-25 /wine/25-50 /wine/50-plus	**LIVE — the master wine collection. Every wine goes in here, as well as its colour collection. The three price bands are split from it automatically.**
`red-wines-1`	/wine/red	**LIVE**
`white-wines-1`	/wine/white	**LIVE**
`rose`	/wine/rose	**LIVE**
`champagne-and-prosecco-1`	/wine/champagne-sparkling	**LIVE — also a Build a Gift shelf**
`port-and-sherry-1`	/wine/port-dessert	**LIVE**
`organic-wine`	/wine/organic-biodynamic	**LIVE**
`non-alcoholic-1`	/wine/alcohol-free	**LIVE**
`wine-gift-sets`	/wine/gift-sets	**LIVE**
`exclusive-to-us`	/wine/exclusive-to-us	**NOT CREATED YET — the page is built and waiting. Create the collection and the page turns on.**
none — hand-picked	/wine/value-edit	**LIVE — curated by us in the site content, not by a collection.**

5.3 Occasions

COLLECTION HANDLE	FEEDS THIS PAGE	NOTES
`christmas-2026`	/occasions/christmas	**LIVE — the hamper collection again**
`mothers-day-gifts`	/occasions/mothers-day	**DORMANT — see section 10**
`fathers-day`	/occasions/fathers-day	**DORMANT**
`valentines-day`	/occasions/valentines	**DORMANT**
`easter-1`	/occasions/easter	**DORMANT**
`gifts-for-baby`	/occasions/new-baby	**DORMANT**
`wedding-anniversary`	/occasions/wedding-engagement	**DORMANT**
`sympathy`	/occasions/sympathy	**NEVER CREATED**
`get-well`	/occasions/get-well	**NEVER CREATED**

5.4 Build a Gift shelves

These eleven feed the Build a Gift picker only. They have no page of their own. Full list with shelf names in section 7.

`all-gifts` `all-food` `chocolate-confectionery-1` `fine-wines-1` `champagne-and-prosecco-1` `candles-diffusers` `beauty` `homeware` `baby` `jewellery` `greeting-cards`

> **DO NOT DELETE A COLLECTION ON THIS LIST**
>
> Deleting one darks its page instantly. If a collection is no longer wanted, tell us first — we take the page down in the same release, so nobody lands on an empty one.

6 The tag dictionary

Tags are case-sensitive in Shopify but the website is forgiving about spelling, case and accents on the wine tags. Type them exactly as shown anyway.

6.1 Kind tags — one per product

TAG	USE IT FOR	WHAT IT DOES
`type:hamper`	Finished hampers	Address becomes /hampers/<name>; hamper template
`type:wine`	Wine, Champagne, port, sherry	Address becomes /wine/<name>; wine template; **arms the over-18 gate**
`type:spirit`	Spirits and liqueurs	As above, with the age gate
`type:addon`	Everything else	Marks it as something that goes into a hamper

> **NEVER USE TYPE:BUILDER-ITEM**
>
> It exists for internal test data only. On the live shop it **removes the product from the Build a Gift picker, from every listing, from search and from the sitemap**, leaving it with no way to be bought at all. If you see it on a real product, take it off.

6.2 Filter tags

TAG FAMILY	ALLOWED VALUES	FILLS THIS FILTER
`occasion:`	christmas, new-baby, sympathy, anniversary, thank-you, birthday, wedding, corporate	"Occasion" on listings that show it
`recipient:`	her, him, couple, family, client	"Recipient"
Country words	"France", "French Wines", "Italy", "Spain"… any spelling	"Country" on wine listings
Region words	"Bordeaux", "Rioja", "Chianti" — the region on its own	"Region"
Grape words	"Syrah", "Chenin Blanc Wine", "malbec"… any spelling	"Grape"

Example: a French Bordeaux would carry `France`, `Bordeaux` and `Cabernet Sauvignon` — three plain tags, no prefix.

6.3 Behaviour tags

TAG	WHAT IT DOES
`contains:alcohol`	Arms the over-18 gate for a Build a Gift item, and marks a corporate gift as alcoholic. **Put it on beer, cider, liqueur chocolates and anything else with alcohol in it** — these are missed most often.
`badge:*`	Card flags. Leave these to us; `badge:exclusive` needs a matching setting the store does not have yet.

6.4 Tags the site ignores

TAG	WHY IT DOES NOTHING
`price:*`	Price bands are worked out from the actual price. Harmless but pointless.
`aisle:*`	Nothing reads it. **Do not add it.**

> **ONCE MORE, BECAUSE IT IS THE EXPENSIVE MISTAKE**
>
> Tags do not put a product on a page. Only collections do. A wine tagged perfectly and in no collection appears on no wine page — that is exactly what happened to the Tokara Director's Reserve White, which was correctly tagged "White Wine" and "Fine Wines" and was in neither collection.

7 Build a Gift — the eleven shelves

When a customer builds their own hamper they browse shelves. A shelf is a collection. Membership of these eleven is the **only** thing that decides what they can pick.

SHELF THE CUSTOMER SEES	COLLECTION HANDLE	ALCOHOL?
Everything	`all-gifts`	No
Food and larder	`all-food`	No
Chocolate and sweet things	`chocolate-confectionery-1`	No
Wine and Champagne	`fine-wines-1`	Yes
Champagne and sparkling	`champagne-and-prosecco-1`	Yes
Candles and fragrance	`candles-diffusers`	No
Beauty and bath	`beauty`	No
Homeware and kitchen	`homeware`	No
Baby and children	`baby`	No
Jewellery and accessories	`jewellery`	No
Cards and stationery	`greeting-cards`	No

> **PUT IT ON TWO SHELVES**
>
> `all-gifts` is the "Everything" shelf, so a product should be in **all-gifts plus its specific shelf**. In all-gifts only, it is findable but buried. In a specific shelf only, it is missing from "Everything", which is the shelf most customers open first.

8 Worked examples

A New hamper — "The Winter Table", €145

Collections	`christmas-2026`
Tags	`type:hamper` `contains:alcohol` `occasion:christmas` `recipient:family`
Appears on	/hampers · /hampers/125-200 *(from the price, automatically)* · /occasions/christmas · homepage hamper band · search
Watch for	It has wine in it, so `contains:alcohol` is not optional.

B New wine — Château Les Moutins Bordeaux 2021, €22

Collections	`fine-wines-1` **and** `red-wines-1`
Tags	`type:wine` `contains:alcohol` `France` `Bordeaux` `Cabernet Sauvignon`
Appears on	/wine/fine-wines · /wine/red · /wine/under-25 *(automatic)* · Build a Gift "Wine and Champagne" shelf
Watch for	Two collections, not one. In red-wines-1 alone it is missing from the main wine page and every price band.

C Box of chocolates — Butlers Festive Collection, €12

Collections	`all-gifts` **and** `chocolate-confectionery-1`
Tags	`type:addon` `occasion:christmas`
Appears on	Build a Gift, on "Everything" and "Chocolate and sweet things" · search
Watch for	No page of its own, and that is correct. If they were *liqueur* chocolates, add `contains:alcohol`.

D Baby blanket — McNutt of Donegal lambswool, €45

Collections	`all-gifts` **and** `baby`
Tags	`type:addon` `occasion:new-baby` `recipient:family`
Appears on	Build a Gift, on "Everything" and "Baby and children" · search
Watch for	It will *not* appear on /occasions/new-baby — that page is dormant. See section 10.

E Alcohol-free sparkling — Noughty Rosé, €14

Collections	`fine-wines-1` **and** `non-alcoholic-1`
Tags	`type:wine` `Spain` — **no** `contains:alcohol`
Appears on	/wine/fine-wines · /wine/alcohol-free · /wine/under-25
Watch for	The over-18 gate still arms from `type:wine`. That is intentional and consistent.

9 It is not showing up

Work down this list in order. It is ordered by how often each one is the cause.

#	CHECK	FIX
1	**Is it in a collection?**	Open the product, look at the Collections panel. Empty is the answer nine times out of ten. Add it per section 4.
2	**Has an hour passed?**	Pages are cached for up to an hour. Wait, or ask us to clear the cache.
3	**Is it in stock?**	Zero stock hides it from every listing and from search.
4	**Is it published?**	Products → the product → Publishing → make sure the online sales channel is on.
5	**Is it in the *right* collection?**	A wine in red-wines-1 but not fine-wines-1 is missing from /wine and every price band. Check both.
6	**Does the page have four products?**	Under four and the page redirects to its parent. Add more, or accept the page stays closed.
7	**Is the collection automated?**	If so, the product joins only when its tags match the rule. Check the rule, then the tags.
8	**Does it have `type:builder-item`?**	Remove it. See section 6.1.
9	**Still nothing?**	Send us the product handle and what you expected. Do not start changing handles.

9.1 The filter is empty but the products are there

Filters are fed by tags, not collections. An empty Country filter means the wines in that collection have no country tags. Add them — and remember rule 3: do not remove the old ones.

10 Dormant collections

Six Occasions collections were removed in the September 2026 clear-out. The pages are still built and still wired to them. They are switched off, not deleted.

CREATE THIS HANDLE	GIVE IT THIS TITLE	TURNS THIS PAGE ON	SUGGESTED RULE
`mothers-day-gifts`	Mother's Day Gifts	/occasions/mothers-day	Tag is "Mothers Day"
`fathers-day`	Father's Day	/occasions/fathers-day	Tag is "Fathers Day"
`valentines-day`	Valentine's Day	/occasions/valentines	Tag is "Valentines Day"
`easter-1`	Easter	/occasions/easter	Tag is "Easter"
`gifts-for-baby`	Gifts for Baby	/occasions/new-baby	Tag is "Gifts for Baby"
`wedding-anniversary`	Wedding and Anniversary	/occasions/wedding-engagement	Tag is "Gifts for Wedding"

10.1 Switching one back on

1. **Products → Collections → Create collection.**
2. Title it as the table says, then **check the handle** at the bottom of the page under Search engine listing. It must match the first column *exactly*. Shopify adds `-1` or `-2` if the handle is taken, and a collection at the wrong handle is invisible to the site.
3. Set it to **Automated** and add the condition in the last column.
4. Check it holds at least four available products.
5. Within the hour the page opens and rejoins the Occasions menu by itself. Nothing needs deploying.

> **THE HANDLE IS THE THING THAT MATTERS**
>
> The title is for shoppers; the **handle** is what the website asks for. This is exactly how the hamper collection ended up named "General Hampers 2026" while the site asks for `christmas-2026` — the title changed, the handle did not.
>
> A manual collection **cannot** be converted to automated after the fact. If you make it manual and want a rule later, you have to delete and recreate — and then watch the handle, because the old one will be taken.

10.2 Still to create, never existed

`sympathy` → /occasions/sympathy · `get-well` → /occasions/get-well · `exclusive-to-us` → /wine/exclusive-to-us

Same procedure. All three pages are built and waiting.

> **IN SHORT**
>
> **Collection = which page.** `type:` **tag = what it is. Other tags = the filters.** If you remember only that, and rule 1, you will not go far wrong.
